

Appendix S1 Principal Component Analysis and correlation analysis of the soil physicochemical properties.

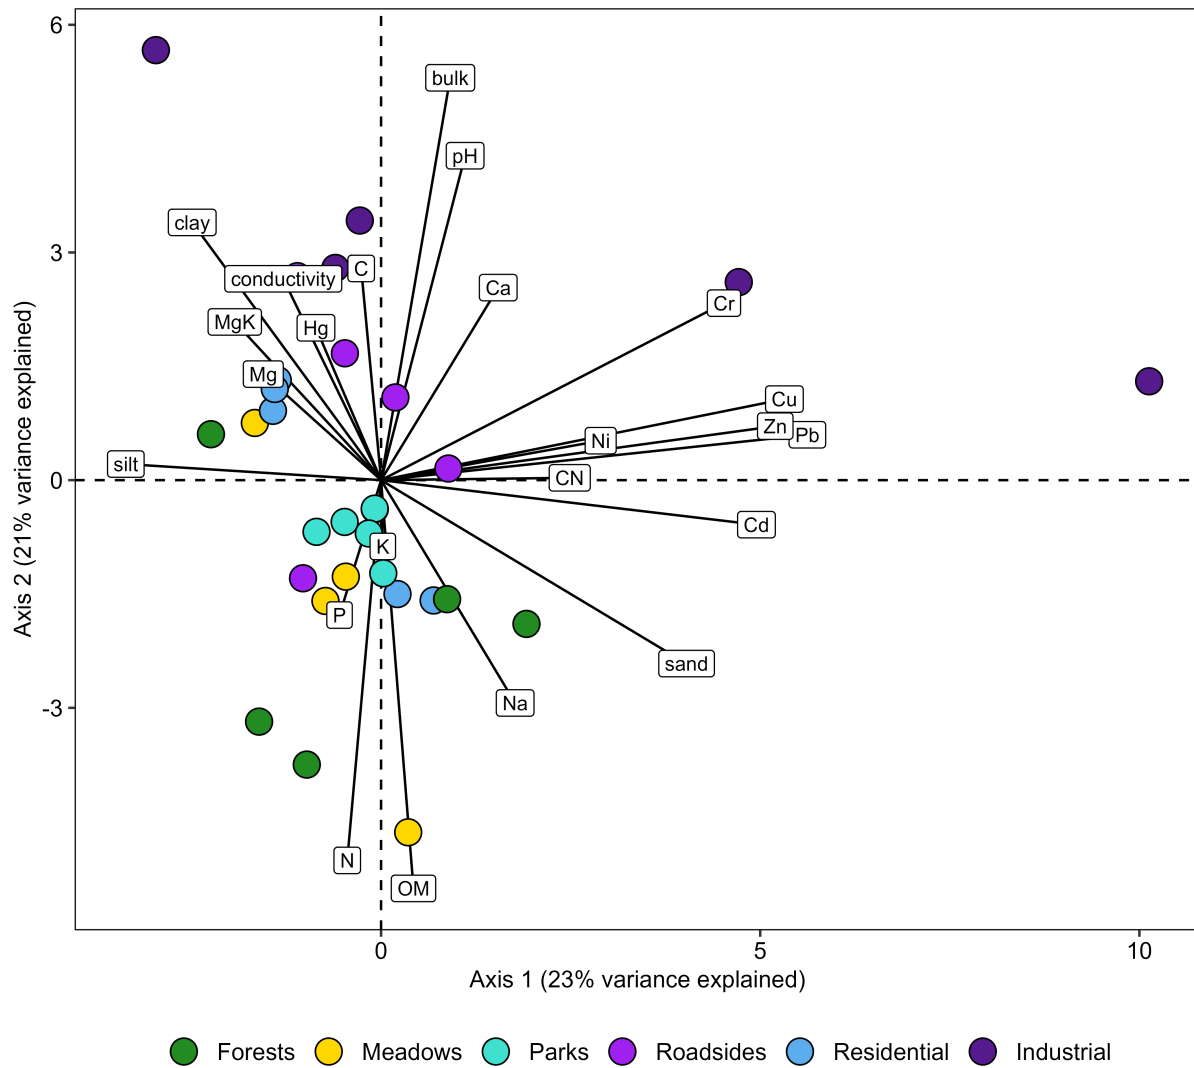

Figure 1: (A) Biplot of the first and second axes of a Principal Component Analysis of the soil physicochemical properties. Circles represent the sampling plots, coloured by habitat. Labeled arrows indicate the contribution of the soil variables to the axes.

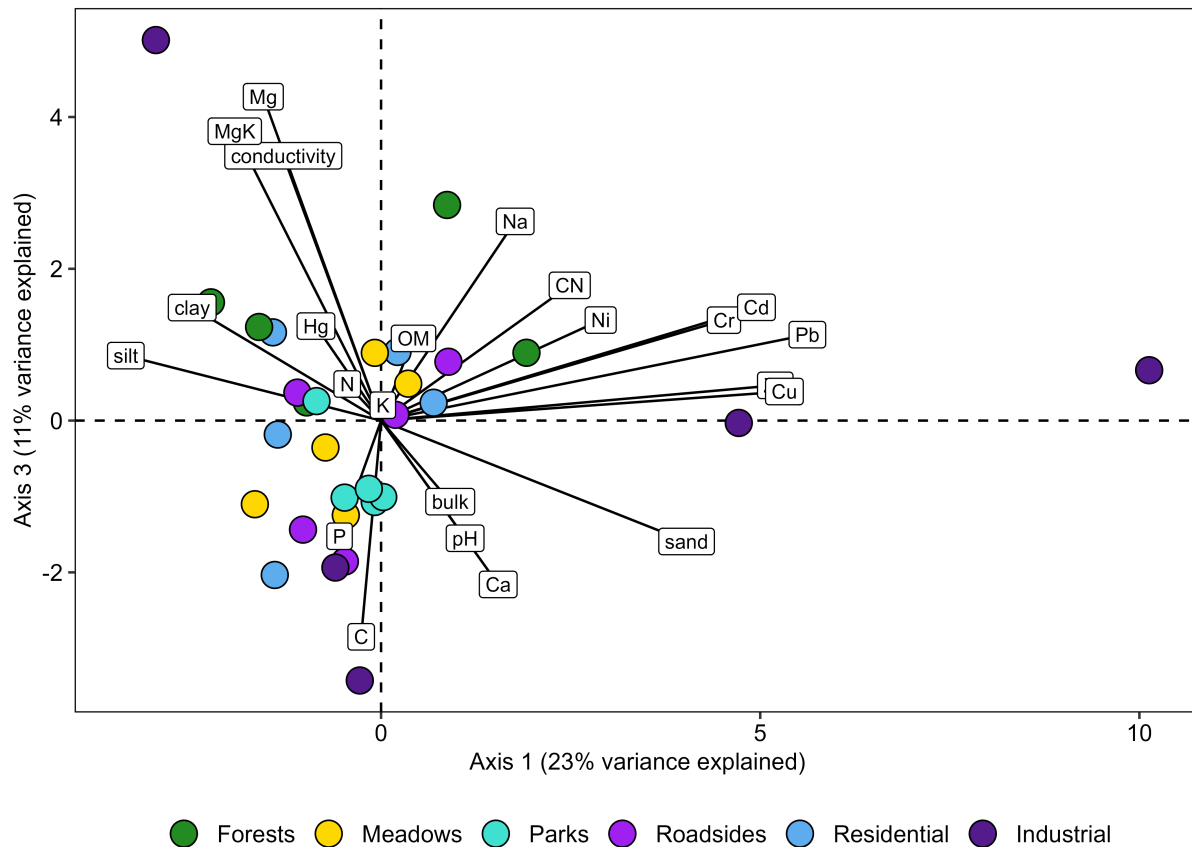

Figure 2: (B) Biplot of the first and third axes of a Principal Component Analysis of the soil physico-chemical properties. Circles represent the sampling plots, coloured by habitat. Labeled arrows indicate the contribution of the soil variables to the axes.

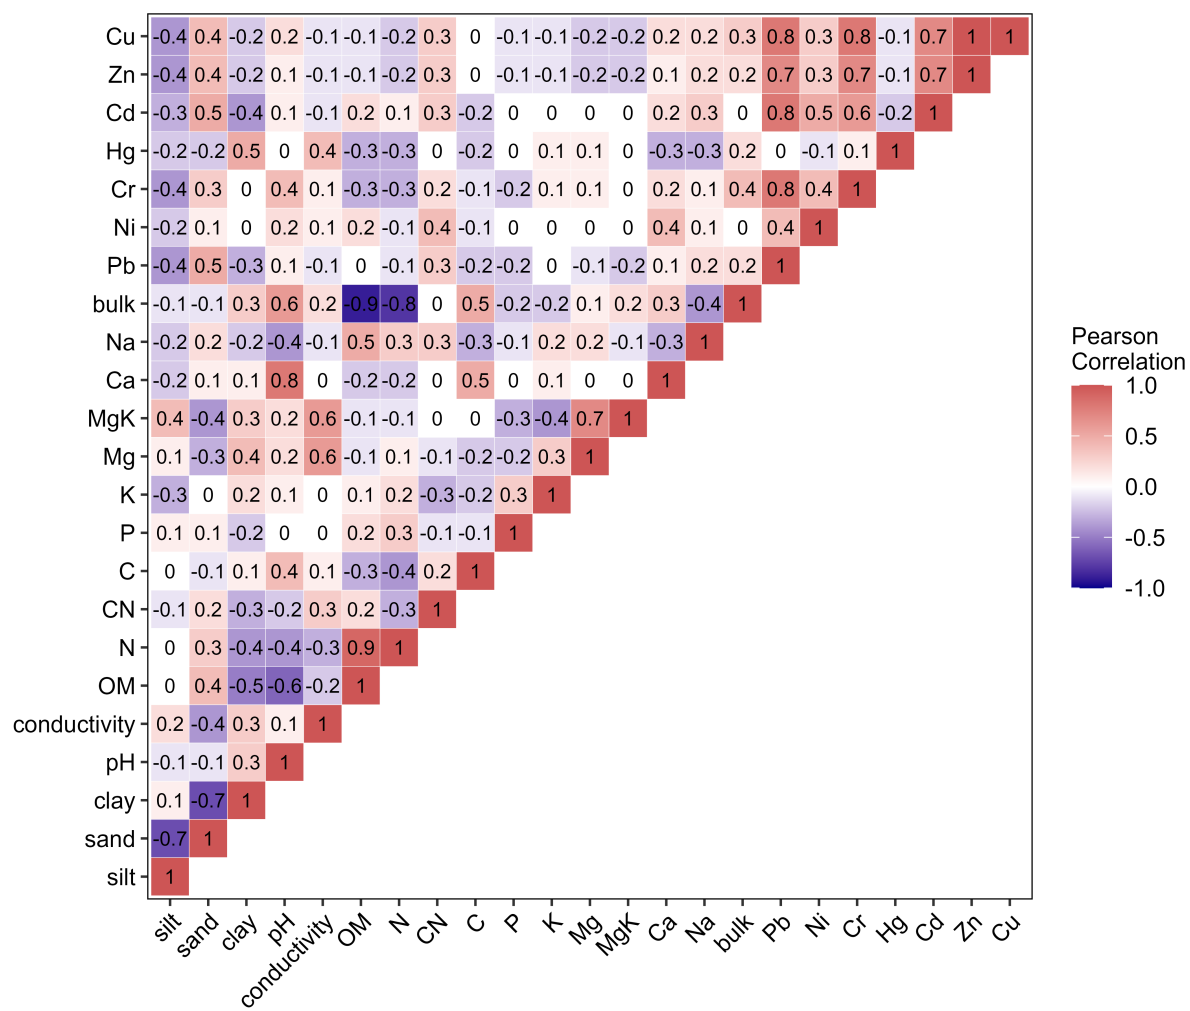

Figure 3: (C) Correlation heatmap of the soil variables.
